RESEARCH PROJECTS

- The '[COMPON](#)' (Comparing Climate Change Policy Networks) project concerns the cross-national comparison of the institutions, ideas and interests that bring about different national policy responses to global climate change. The COMPON study will trace the flow of cognitive models ("facts," frames, ideas and normative evaluations) concerning climate change between the global and national levels, and within the national levels in the policy-formation process, for a number of countries. Our policy network method includes the full range of organizations involved in climate change politics (government agencies, political parties, business, unions, NGO and movement associations). The issue of climate change is diffuse in responsibility and seemingly distant in impact, so it readily suffers from risk-discounting. Therefore, effective policy response depends upon building an "epistemic community" that accepts the problem as serious and worthy of action. To generate action, this epistemic community must include more than scientists; it must embrace an "advocacy network" composed of diverse stakeholders in government and society. Our working hypothesis is that, as advocated by

Agenda 21, government provision of venues for direct participation by diverse stakeholders (from business to NGOs) will result in more effective policy response to climate change. The project will include national cases that represent variation in advocacy networks, participatory venues and policy outputs about climate change: Japan, China, the United States, Canada, Germany, the Netherlands, Austria, Sweden, England, and Greece (as well as others). It will also include global sources of scientific information, in particular the United Nations Intergovernmental Panel on Climate Change (UN-IPCC).

- The [*DEMOS' -Democracy in Europe and the Mobilisation of Society*](#) project focuses on forms of deliberative democracy as they are elaborated “from below” and implemented both in the internal organization of social movements and in experiments of participatory decision-making. In particular, the project analyses the issue of active democracy as it emerges in the theorization and practices of the movements that have recently mobilized on the issues of globalization, suggesting patterns of “globalization from below”. First results appear in della Porta D. (ed.) [*'Democracy in the European Social Forums'*](#) (Routledge, 2009).

- The project *'European Green Party Members'* set out to collect data on green party members across Western Europe, using a ‘common core questionnaire’ mailed to random samples of members during 2002 and 2003. It was funded by the British Academy under its Large Research Grant programme (LRG-31746) and directed by Wolfgang Rüdiger (University of Strathclyde). Additional support was provided by the Research Development Fund of the University of Strathclyde. The financial support of the British Academy and the University of Strathclyde is gratefully acknowledged. Surveys were successfully completed in 13 countries, generating more than 6,000 completed questionnaires. Individual national surveys were carried out under the responsibility of national researchers, often with additional financial support from their home institutions. The research team have managed to secure new funding from the British Academy for the years 2004-2005 under the title of COMPARATIVE GREEN

POLITICS RESEARCH GROUP (CGPRG), aiming at producing a book based on the data collected. The project's coordinator is Dr. Wolfgang Ruedig, University of Strathclyde, UK (w.rudig@strath.ac.uk)

- The '[*STAGE: Science Technology and Governance in Europe*](#)' project aims: to understand more about the structure, process and boundary characteristics of a representative range of national policy cultures in confronting common issues of science and technology governance; to analyse the particular S and T issues, actors and processes which each policy culture highlights in relation to three contrasting technology domains - information and communication technology, GM technology as applied to food and medicines, and environmental management - examining particular brokering institutions and processes which construct issues, rhetorics and repertoires of response, and mediate outcomes; and, to incorporate this learning into a conceptual model which offers a more secure knowledge base to frame wider social participation in S&T governance. The project is funded by the E.U. (**European Commission Contract number: HPSE-CT2001-50003**) and is co-ordinated by Dr. Peter Healey, Brunel University, UK (Peter.Healey@martininstitute.net).
